

### General Description:

The silicone multitubular drain is a passive drainage device designed for complex surgical procedures. Its flexible structure minimizes trauma to surrounding tissues, while its fully radiopaque line enables precise monitoring via medical imaging. Ideal for postoperative fluid drainage, this product ensures efficiency and safety.

### Technical Specifications:

- **Material:** Soft and durable medical-grade silicone.
- **Length:** 400 mm.
- **Width:** 35 mm.
- **Visibility:** Fully radiopaque line for accurate imaging control.
- **Fixation:** Secure-Clip system for optimal stabilization.
- **Capacity:** Passive drainage based on capillary action.
- **Sterilization:** Sterile, single-use product.

Size	Length	Width	Reference
S	400mm	20mm	2011-0020
M	400mm	25mm	2011-0025
L	400mm	35mm	2011-0035
XL	400mm	45mm	2011-0045

### Applications :

- Surgical procedures requiring significant and continuous drainage.
- Postoperative fluid management in deep wounds.
- Used in abdominal and thoracic surgeries requiring close monitoring.

### Usage Precautions:

- Check the integrity of the packaging before use.
- This product is sterile and for single use only: do not reuse.
- Follow medical protocols for proper installation and removal of the drain.
